

JASON COCHRAN

Senior Full-Stack Engineer · Agent Infrastructure

jlcochran2013@gmail.com · jasoncochran.io · linkedin.com/in/cochranjason · Midland, TX (remote, US)

PROJECTS

OpenClaw VPS · Managed AI Agent Hosting

Strataga LLC · Q4 2025–Q1 2026 · openclawvps.com · Live

Multi-tenant agent hosting: BYOK model, multi-channel delivery (web / Telegram / Tailscale-wired), per-tenant cost and latency observability, SLO-gated deploys, incident lifecycle tracking, and a customer-health scoring pipeline.

Tech: Next.js 16, React 19, Convex, Stripe, Tailscale, Sentry, PostHog, Claude Code, MCP.

Featured: Product Hunt · Hacker News (item 47507993) · Indie Hackers · Fazier · Dev.to.

EXPERIENCE

Senior Full-Stack Engineer · Servant · 2025/02–2025/09

Shipped EMA onboarding flow on NestJS + Next.js + Prisma + React Query with AWS-hosted services. Owned the production migration from the legacy onboarding path to the new NestJS flow; handed off with documentation and runbooks before role ended.

Senior Software Engineer · Big D Companies · 2024/03–2024/09

Led the legacy PHP → React / Next.js conversion of a SCADA-connected ERP used across oil/gas field operations; migrated the primary operator-facing screens off PHP without downtime. Integrated the new stack with existing SCADA data feeds and ERP tables; kept the on-call operator workflow continuous during the cutover.

Senior React Native Engineer · Nutrien · 2023/09–2024/02

Built cross-platform features on the Nutrien mobile app (iOS + Android) used by field reps in agriculture operations. Shipped data-collection and workflow screens that ran offline-first and synced once back online.

Senior Software Engineer · TxMQ · 2022/10–2023/06

Led an AI research initiative with OpenAI: prototyped LLM-assisted internal tooling on top of existing AngularJS / Ionic client surfaces. Early applied-LLM production work, two years before the current agent wave. Delivered production client features in the AngularJS + Ionic stack alongside the research track.

Senior Mobile Engineer · Verizon · 2021/10–2022/11

Shipped the AMC Walking Dead NFT experience: custom blockchain + JS SDK integration inside the Verizon mobile app, production-grade for a tier-1 carrier launch. Built and documented the JS SDK handoff used by downstream teams consuming the NFT integration.

EARLIER EXPERIENCE

2015–2021 Solutions Architect (self-employed, 30+ shipped projects across oil/gas, travel, and enterprise; Key Energy, Warren Equipment, Enertia, OneTravel.com).

SKILLS

Languages: TypeScript, Python, Rust, JavaScript

AI / Agents: Claude Code, Cursor, MCP servers, OpenAI SDK, Anthropic SDK, agent infrastructure, RAG

Frameworks: Next.js 16, React 19, NestJS, React Native

Backend: Node.js, Convex, PostgreSQL, Redis

Infrastructure / Ops: Railway, Docker, Cloudflare, Sentry, PostHog, Stripe, Resend
